RAHUL GUPTA

Python Backend Developer (Django, Flask) | Portfolio

8777275225 | rahulguptaa650@gmail.com | Kolkata,India | RahulGupta | CodageWithRahul

Career Objective

Python Developer skilled in **Django** and **Flask**, with hands-on experience building scalable web applications and RESTful APIs. Eager to contribute to innovative projects at a forward-thinking company, leveraging expertise in backend development to drive efficient solutions and team success

WORK EXPERIENCE

TCS iON Internship

Project: CAPTCHA Service 8 July 2025 – 11 August 2025

- Developed a **secure and reusable CAPTCHA service** using **Java Servlets** to protect web applications from automated bot submissions.
- Implemented **dynamic CAPTCHA image generation** with randomized and rotated characters to enhance security.
- Ensured **backend-only CAPTCHA validation**, preventing exposure of sensitive CAPTCHA logic or values to the frontend.
- Designed the service to be **easily integrated with multiple web forms** (login, registration, contact, feedback) using servlet-based endpoints.

EDUCATION

- **Amity University Online** (Pursuing)
  Bachelor of Computer Applications (BCA) July 2023 – July 2026
- **Anglo Arabic Secondary School, NIOS**
  Higher Secondary 58% | Secondary 63%

PROJECTS

Advanced To-Do Application – Python Django

- Developed a full-stack task management web application using Django following the MVC (MTV) architecture.
- Implemented user authentication (login, logout, registration) with secure session handling.
- Built advanced task features including CRUD operations, task prioritization, due dates, and status tracking.
- Designed a clean, responsive UI using HTML, CSS, and Django Templates.
- Implemented form validation, access control, and error handling to ensure data integrity. **Source Code:**

Student Management System – Python Flask

- Developed a full-stack web application using Flask and SQLite to manage student enrollment and course records.
- Implemented features including student enrollment, course management, and search/filter functionality.
- Deployed the application on Render with live access. **Source Code:**

ISP Billing System – Java Swing

- Developed a desktop-based billing application for local ISPs.
- Implemented customer data management, bill generation, and printing/export features.
- Designed a user-friendly interface with validation and error handling for smooth operation.

SKILLS

- **Languages**: Python, Java
- **Web Technologies**: HTML, CSS, JS (Basic)
- **Frameworks & Tools:** Django, Flask, Git, GitHub
- **Databases:** PostgreSQL, MySQL
